

ACKNOWLEDGMENTS

This survey would not have been possible without the interest, assistance, and cooperation of several individuals and organizations.

We wish to gratefully acknowledge the assistance of all who had a part in the survey and especially the following:

City Manager, Dr. O. P. Hart and his office staff furnished valuable information concerning population, water consumption, the city planning program, and made available the boat facilities of the Miami Harbor patrol for sampling.

Clyde J. Roberts, Sanitary Engineer, Dade County Health Department, aided materially in contacting and making necessary arrangements with city officials and securing their assistance and cooperation, in setting up sampling stations, in the routine work in reviewing the report and in directing the survey.

Sergeant Bob Yauncey and the Miami Harbor Patrol furnished the transportation and guidance around the area.

Donald L. Milliken and R. H. Charley, U. S. Geological Survey, made the Water Resources Investigation and assisted in securing flow data information and in interpreting their investigation.

Reinhold Wagner and Klaas Van Herpen, Miami Branch Florida State Board of Health Laboratory, did the bacteriological work on the samples.

Allen T. Hill, Jr., Miami Branch Florida State Board of Health Laboratory, did most of the chemical determinations on the samples.

William C. Tims, University of Miami sewage plant operator, did the BOD determinations.

J. E. Cotton, City Engineer, supplied much of the information and guidance in appraising sewage volume.

W. A. Glass, Department of Water and Sewers, furnished valuable information concerning the city sewerage system.
