Eastward, Miami enjoys the unmatched water of Biscayne Bay
and the Atlantic Ocean, whose white beaches and sparkling sea water invite the world for fun and pleasure.

Westward, Miami has a supply of fresh water to sustain its life and provide
for its ever growing needs—a supply which extends into the vastness of the Everglades.

While some men have sought their fortunes from the sunny climate and the beaches, others have dedicated
their efforts to providing pure water of the highest quality at the lowest price
for the area's ever increasing population. This is the story of how they accomplished their goal.

We hope that you have found this brief summary of the many activities and functions of the City of Miami Water and Sewer Department interesting. This Department works diligently to maintain and improve its services and to save customers many dollars by good business management.

The Department welcomes your questions and invites you to tour the facilities described.

A better understanding of the efforts of the Board and the Department to serve the public makes each of us a more informed citizen.
