PLANTS OF EVERGLADES NATIONAL PARK

A Preliminary Checklist of Vascular Plants

Introduction

This list is based upon specimens in the herbarium of Everglades National Park, located at the South Florida Research Center. Species which have been seen by the authors in Everglades National Park (ENP), but which are not currently represented by specimens from Everglades in the ENP herbarium, are designated by an asterisk (*). The list includes plant taxa occurring within the boundaries of ENP which are native or naturalized in South Florida. Naturalized exotic plant species are preceded by the letter "E." Because of the difficulty of determining which weedy species are non-native, only those which are almost certainly exotic (based largely on range information given in Long and Lakela's Flora of Tropical Florida (1976 edition), in Adams' Flowering Plants of Jamaica, or in Hitchcock and Chase's Manual of the Grasses of the United States are so designated. Species occurring currently in cultivation or persisting locally from past cultivation are not included, except for certain formerly cultivated species for which specimens exist in the ENP herbarium and which may persist in several locations (preceded by the letter "C"). Additional information regarding the flora of Key Largo Ranger Station (outside the boundaries of Everglades National Park) and regarding cultivated exotic species occurring in specific localities is included in addenda.

Species are included if they have been collected in Everglades National Park even though they may have been extirpated. Species which have apparently disappeared from the flora of ENP include: Brassia caudata, Macradenia lutescens, Oncidium carthagenense, Ophioglossum palmatum, and Rhipsalis baccifera.

In order to facilitate use of this list with Long and Lakela's Flora of Tropical Florida, the name used by Long and Lakela is given in parentheses following our name in instances where our nomenclature diverges from that of their Flora. Species found in ENP which are not included in Long and Lakela are indicated with the letter "X."

Acknowledgements

We acknowledge the crucial contribution of all those who have contributed to the herbarium of Everglades National Park during the past 25 years. Dr. F. C. Craighead, Sr., the most prolific contributor, deserves special mention. We wish to thank Dottie Anderson for particularly careful typing of this manuscript. Lois Granskog provided a useful review.

Summary of Symbols Used in List

- * - Indicates no ENP specimen in ENP herbarium.
- X - Indicates species is not listed in Long and Lakela (1976).
- C - Indicates species persists from past cultivation.
- E - Indicates plant is not native to South Florida.
- A - Addition to list (1983).
