INTRODUCTION

Program Goals and Objectives

The primary goal of the INRMW program is to improve the lives of people in Georgia by utilizing and managing natural resources more sustainably. Target resources include water, soil, vegetation and the ecosystems that encompass them. To achieve this goal, the program aims to realize the following objectives:

1. Reduce threats to natural resource sustainability in targeted watersheds by introducing innovative approaches and practical models of participatory integrated natural resources management;
2. Empower local communities and authorities by promoting local governance mechanisms that enable rural people to advocate for change that better their lives;
3. Achieve tangible results in behavior change of population that visibly illustrate the linkages between ecosystem services and human benefits;
4. Increase capacity for integrated and adaptive natural resources management at community, municipal, regional and national levels by developing knowledge and skills and improving management tools within key institutions;
5. Catalyze more widespread implementation of integrated natural resource management by raising public awareness and supporting the development of more enabling policy and institutional frameworks.

This report provides information on activities carried out in the first and second years of the program's implementation (Y1 and Y2) to empower local communities and authorities in selected municipalities and communities of the upstream and downstream watershed areas of the Alazani and Iori River basins.

Approach

Engagement of local communities and authorities in the program and the empowerment of these local communities were divided into two phases: a) informing local stakeholders about the INRMW program and its objectives and consulting with them on the process of engaging the communities; b) capacity building of local communities and authorities to enable them to sustainably manage natural resources. Objectives were defined for each phase and implementation mechanisms and tools were developed:

The first phase included the following activities:

- Initial meetings with local authorities to present the INRMW program;
- Surveying the communities in the pilot watersheds and preparation of communities' profiles;
- Selection of target communities for participation in the INRMW program.

Capacity building of local communities and authorities included the following activities:

- Establishment of community incentive groups (CIGs) and legal registration of Community Based Organisations (CBOs) in target communities;
- Training for the CBOs' members;
- Capacity building of local authorities;
- Promotion of the commencement of community initiatives and preparation of small-scale projects related to sustainable management of natural resources.

The following chapters of this report provide more detailed information on the above activities and achieved results.

1. IMPLEMENTED ACTIVITIES

1.1. Informing local stakeholders about the INRMW program and its objectives

1.1.1. Initial meetings with local authorities

In the first year (April-September 2011), INRMW program activities focused on the upstream watershed areas of the Alazani-Iori and Rioni River basins. These watersheds are located in the Akhmeta and Telavi municipalities of the Kakheti Region and the Ambrolauri and Oni municipalities of the Racha-Lechkhumi-Kvemo Svaneti Region. In the second year (October 2011 - September 2012), program activities expanded to downstream watershed areas of the Alazani-Iori and Rioni River basins covering the Senaki and Khobi municipalities of the Samegrelo-Zemo Svaneti Region and the Dedoplistskaro municipality of the Kakheti Region.

Prior to initiating on-the-ground activities, the INRMW program's Governance Officer organized introductory orientation meetings with regional and municipal governments in targeted watershed areas.

More specifically, in the first half of May 2011, the INRMW project held meetings with Racha-Lechkhumi-Kvemo Svaneti's Regional Administration and the authorities of the Ambrolauri municipality. The following persons participated in the meetings: Mr. Davit Gagoshidze, Governor of Racha-Lechkhumi and Kvemo Svaneti, Mr. Aleko Kvatadze, First Deputy Governor, Mr. Kakha Parjanidze, Head of the Legislative Body (Sakrebulo) of the Ambrolauri municipality, Mr. Levan Jmukhadze, Head of the Executive Body (Gamageoba) of the Ambrolauri municipality, Mr. Rostom Gagoshidze, Head of the Spatial Planning and Infrastructure Committee of Ambrolauri's Sakrebulo and Mr. Tamaz Lomidze, Head of the Natural Resources Committee of Ambrolauri's Sakrebulo. The INRMW program's Governance Officer introduced the INRMW program's objectives to the meeting participants and discussed potential program activities in the region.

Regional and local authorities expressed interest in participating in the INRMW program. The Governor proposed that Mrs. Teona Ghadumadze, a specialist in Ambrolauri municipality's Sakrebulo, serve as the point of contact between local and regional authorities and the INRMW Program.

In addition, the INRMW program held meetings at the Ambrolauri Youth Center with the participation of local authorities, CBOs and NGOs working on environmental issues, the education resource center of the Racha-Lechkhumi and Kvemo Svaneti Region, the Ambrolauri Youth Center and CIGs in Tsesi and Sadmeli communities. Meeting participants discussed priority environmental problems and Ambrolauri municipality's needs.

Needs discussed included: the poor state of the water supply system and flash floods caused by the blockage of drainage canals in Khidikari community's Khimshi village; landslides in Meore Tola village of the Khvantchkara community; drinking water supply problems and the erosion of Kheori River's banks in Likheta village of the Likheta community; landslides in Dokhnadze and Kachaeti settlements as well as the need to construct a dumpsite in Nikortsminda village of the Nikortsminda community; drinking water supply problems in Saketsia village of the Znakva community; the erosion of the Aska and Rioni Rivers' banks in the Tchrebalo community; the need to rehabilitate the water supply system and increase the water supply in Khonchiori village of the Namanevi community; constructing a dumpsite in Skhvava village of the Skhvava

community; works to protect Kveda Shavra village in the Ghadishi Community against landslides; the rehabilitation of headworks and water pipes in Tbeti village.

On 17 May, the INRMW program organized a meeting in the Oni municipality to introduce the INRMW program's goals and objectives, discuss steps for future cooperation, identify contact persons and collect initial information about the communities' needs. The following persons from the local authorities participated in the meeting: Mr. Shalva Japaridze, Head of Oni municipality's Sakrebulo (the local legislative body), Mr. Imeda Gobejishvili, Head of Oni municipality's Gamgeoba (the local executive body), and Ms. Eka Berishvili, Head of the Spatial Planning and Infrastructure Committee of Oni municipality's Sakrebulo. Ms. Eka Berishvili was appointed as the point of contact for the INRMW program.

The meeting's participants discussed the following environmental problems: unsatisfactory water quality in water supply pipes especially during rainy periods; poorly established and maintained dumpsites; dry ravines filled with sediments; flashfloods; land erosion; landslides; and the poor state of drinking water supply infrastructure.

In the beginning of June 2011, the INRMW program arranged meetings with the Kakheti Region's regional administration and municipal governments. At the meeting, Kakheti's regional administration was represented by Mr. Giorgi Sibashvili, First Deputy Governor, Mr. Nugzar Khutsaidze, Head of Telavi municipality's Sakrebulo, Mr. Vasil Davitashvili, Head of Telavi municipality's Gamgeoba, Mr. Temur Gogiashvil, Head of the Economic and Infrastructure Service of Telavi municipality's Gamgeoba and Mr. Zaza Zazashvili, Head of the Spatial Planning and Infrastructure Committee of Telavi municipality's Sakrebulo. Mr. Lasha Chiviashvili, Head of the Economics and Infrastructure Service at the Regional Administration, was selected as the point of contact for cooperation with the INRMW Program.

On 7 June 2011, the INRMW program organized a meeting with representatives of NGOs from the Telavi municipality. INRMW representatives introduced the goals and objectives of the program to meeting participants. The meeting participants discussed environmental problems in the Telavi municipality.

The following persons participated in the meeting: Ms. Julieta Dzamukashvili, Responsible Person for Cooperation with NGOs in the Telavi municipality, Ms. Nino Mezvrishvili, representative of the Community Center "Kiskisa", Ms. Maia Chagelishvili, representative of the Community Center "Gulgula", Ms. Mariam Darchiashvili, representative of the Community Union "Vardisubani" and Ms. Ketis Samadashvili, representative of the NGO "Community and Environment".

The meeting participants discussed the following environmental problems that affect Telavi municipality's communities: walnut tree groves in Gulgula village are water bogged so the population cannot pick the walnuts and the harvest is mostly lost; the storm water drainage canal in Ruispiri village's Chachkana ravine is clogged with sediments and solid waste, preventing storm water from flow through the canal and flooding houses and farm lands during heavy rains in the spring (A similar problem characteristics many ravines in the Telavi municipality. In the absence of adequate waste collection systems, the majority of the village's population dump household waste in the ravines, filling up the ravines and drainage canals. During flash floods, the storm water flows over the canals and floods households and farmlands); drinking water supply pipes in Pshaveli village need to be replaced as the pipes are made of asbestos which is an ecologically

hazardous material; landslide risk and land erosion due to overgrazing.

On 8 June, at a meeting with Akhmeta's Municipal Authorities, the INRMW program introduced its goals and objectives, planned future cooperation steps, identified points of contact and collected initial information on environmental and natural resources management problems in the municipality. The following persons from the local authorities participated in the meeting: Mr. Koba Maisuradze, Executive of the Akhmeta municipality, Mr. Kakha Mamulashvil, Deputy of the municipality's Gamgebeli, Mr. Aleksandre Mailashvili, Head of the municipality's Sakrebulo and Mr. Vazha Naskidashvili, Specialist of the municipality's Infrastructure Service. Ms. Rusudan Jugashvili, Head of the Tourism Development, Public and International Relations Department, was proposed as the point of contact for cooperation with the INRMW program.

On the same day, the INRMW program held a meeting with representatives of NGOs in the Akhmeta municipality. Following the introduction of the INRMW program's goals and objectives, meeting participants discussed environmental problems in the Akhmeta municipality. The following persons participated in the meeting: Ms Rusudan Jugashvili, representative of the NGO "Akhmeta", Ms. Ia Antashvil, representative of the NGO "Kakheti", and Mr. Temo Terterashvil, member of the CIG from Matani village. Participants discussed the following environmental problems that concern the communities of Akhmeta municipality: the absence of water quality controls, illegal dumpsites that blocked ravines, flashfloods, land erosion, landslide zones, and deteriorated drinking water and irrigation water supply systems.

In March 2012, the INRMW program held a meeting with the Administration of the Samegrelo-Zemo Svaneti Region and the Local Authorities of the Senaki and Khobi municipalities. The meeting was convened to present the goals and objectives of the GLOWS/INRMW program and to identify initial target communities in the Khobi and Senaki municipalities.

The following persons participated in the meeting: Vakhtang Tskhadaia, Deputy Governor of the Samegrelo-Upper Svaneti Region, Gocha Bagaturia, Head of the Department of Relations with Local Governance and State Agencies, Nino Kikabidze, Field Operations Coordinator (CARE), Nana Kvrivishvili, Governance Officer (CARE) and Giorgi Shamugia, Community Mobilizer (CARE).

On 6 March, the following persons participating in a meeting in the Khobi municipality: Mamuka Chokhanelidze, Head of Khobi's Municipal Council, Nino Kikabidze, Field Operations Coordinator (CARE), Nana Kvrivishvili, Governance Officer (CARE) and Giorgi Shamugia, Community Mobilizer (CARE).

On 7 March, the following persons participated in a meeting in the Senaki municipality: Tengiz Adamia, Governor of the Senaki municipality, Vepkhia Vepkhvadze, Deputy Governor of the municipality, Nino Kikabidze, Field Operations Coordinator (CARE), Nana Kvrivishvili, Governance Officer (CARE) and Giorgi Shamugia, Community Mobilizer (CARE). During the meeting, the Governance Officer Nana Kvrivishvili presented the GLOWS/INRMW program's goals and objectives, opportunities in the region and potential activities to be implemented in the Samegrelo Region under the INRMW Program.

The Deputy Governor and Khobi's and Senaki's local authority representatives expressed their interest and willingness to provide any kind of support to the program. They proposed the following contact persons to the INRMW program: Gocha Bagaturia, Head of the Department of Relations with Local Authorities and State Agencies in the Governor's Administration; Lela Shamatava, Chief of Staff of the Khobi Municipal

Council in Khobi municipality; Vepkhia Vepkhvadze, Deputy Head of Senaki municipality's Gamgebeli.

At the beginning of March 2012, the INRMW program organized meetings with the Dedoplistskaro municipality's local authorities. The following persons participated in the meeting: Mr. Nikoloz Shanshiashvili, Head of the municipality's Gamgebeli; Deputies of the Gamgebeli: Mr. Aleksandze Alughishvili, Mr. Emzar Janashvili and Mr. Revaz Kokiashvili; Ms Ekaterine Tsimakuridze, Head of the Department of Relations with International and Non-governmental Organisations; and Ms. Lali Mangoshvili, Senior Specialist of the Department of Relations with International and Non-governmental Organisations. Ms. Lali Mangoshvili was appointed as the contact person for cooperation with the INRMW program.

In total, the INRMW program held ten meetings with local authorities and NGOs in the reporting period: three meetings were held with the Regional Administrations of the Samegrelo-Zemo Svaneti, Racha Lechkhumi and Kvemo Svaneti and Kakheti regions, and seven meetings were held with the municipal authorities of the Khobi, Senaki, Oni, Ambrolauri, Akhmeta, Telavi and Dedoplistskaro municipalities. Overall, the meeting participants expressed interest in participating in and supporting the INRMW program as long as local authorities and people also consider the program's goals and objectives as priority issues.

The INRMW Program Team proposed the establishment of working groups at the municipal level to include local community trustees, community representative and other local stakeholders. Representatives of local NGOs were very active during the meetings. They emphasized that international assistance and non-governmental programs are essential for solving local environmental problems.

1.1.2. Communities survey and selection of target communities

The INRMW program developed a questionnaire to collect information on the local socio-economic and demographic context, the state of infrastructure, the availability of natural resources and the existence of environmental problems in the target municipalities' communities located in the upstream and downstream watersheds of the Rioni and Alazani-Rioni River basins. The INRMW program's partners participated in or were consulted during the development of the questionnaire. The ultimate goal of these data collection efforts was to select communities in the target municipalities that would participate in the INRMW program.

Prior to starting the survey, the INRMW program's Grants Manager, Governance Officer, Program Field Coordinators and Community Mobilizers met with target municipalities' local authorities. Seven consultation meetings were held in the targeted municipalities (Akhmeta, Telavi, Dedoplistskaro, Oni, Ambrolauri, Khobi and Senaki Municipalities) regarding the communities' participation in the survey and techniques for filling out the questionnaire. Representatives of the communities in the local legislative bodies and trustees of the communities' local governments participated in the meetings. INRMW staff introduced the questionnaires and the purpose of the survey to the meeting participants.

INRMW program representatives including the Field Office Coordinators and Community Mobilisers visited each community to administer the survey. Local government representatives in each community and two to three representatives of each village participated in the survey. Information was collected at the village level. In Y1 of program implementation, covering the period of July-August 2011, the INRMW program

carried out the survey in the municipalities of the upstream pilot watershed areas (Akhmeta, Telavi, Ambrolauri, Oni municipalities). In Y2 of program implementation, covering the period of March-May 2012, the survey was carried out in the downstream pilot watershed areas (Senaki, Khobi, Dedoplistskaro municipalities).

In total, 670 local people—including 270 women—participated in the survey. The INRMW program administer questionnaires and conducted interviews in 201 villages in 108 communities including 24 villages (22 communities) in the Telavi municipality, 39 villages (13 communities) in the Akhmeta municipality, 32 villages (11 communities) in the Oni municipality, 41 villages (12 communities) in the Ambrolauri municipality, 15 villages (14 communities) in the Dedoplistskaro municipality, 42 villages (14 communities) in the Senaki municipality and 8 villages (4 communities) in the Khobi municipality.

The INRMW program organized a number of workshops in Y1 and Y2 to select target communities in the upstream and downstream watershed areas. Representatives of all INRMW program partners, USAID, USDol and the Georgian Ministry of Environment participated in the selection workshops. The workshop participants used the information collected from the survey to select the target communities. The program based the selection on a multi-criteria analysis and scoring methodology developed specifically for the project.

The selection process was participatory, transparent and based on the best available information, and 60 communities were selected in the upstream and downstream pilot watershed areas for participation in the program: 30-30 communities were selected in the upstream and downstream watersheds of each river basin - the Alazani-Iori and Rioni River basins.

Detailed information on the selection of targeted communities is available in two separate reports: the Technical Report on the Selection of Target Communities in Pilot Watersheds (Ambrolauri, Oni, Telavi and Akhmeta Municipalities), October 2011, and the Technical Report on the Identification of Target Communities in Pilot Watersheds (Khobi, Senaki, Dedoplistskaro Municipalities), October 2012.

1.2. INRMW Participatory Planning

During the reporting period, the INRMW program organized a series of meetings, workshops and consultations for the development of Integrated Natural Resource Management Plans for target watersheds of the Alazani-Iori and Rioni River basins. The INRMW program held these events between September and December 2011 and between May and September 2012.

The planning process was organized in the following consecutive stages: a) Identification of environmental and natural resources management related issues in the pilot watersheds; b) Prioritization of the issues; c) Priority issues validation; d) Identification of priority actions/interventions to address priority issues; e) Validation of priority actions/interventions.

A wide range of local stakeholders including target communities, municipal and regional authorities, local NGOs and representatives of businesses were involved in identifying priority issues, needs, opportunities

and potential interventions for the sustainable management of the watersheds, ecosystems and resources. At the same time as stakeholder consultations, a team of local experts conducted detailed watershed studies on various environmental and resources management issues including water resources, land resources, biological resources, forest management and waste management. Separate studies were conducted on renewable energy resources, the watersheds' vulnerability to natural disasters and the impact of climate change on the watersheds.

The INRMW program organized three workshops in each municipality; each workshop involved the participation of representatives from the target communities. The first workshop's goal was to identify priority issues in the target communities. As a result, three environment/natural resource management issues were identified as top priorities for each community. At the second workshop, a final list of concerns was presented to the local stakeholders. The aim of the second workshop was to build a common understanding and secure an agreement of interested parties on priority issues. At the third workshop, the final list of potential structural and nonstructural measures developed under the project, including the expected impact of these measures on the environment, were presented to local stakeholders who validated the measures.

From September to December 2011, the INRMW Program organized meetings with target communities, municipal authorities and representatives of NGOs and the business sector in the upstream watershed areas of the Alazani-Iori and Rioni River basins. . More specifically:

- Between the 20th and 23rd of September 2011, the INRMW program team organized a workshop on the prioritization of environmental and natural resources management problem with targeted communities in the Ambrolauri and Oni municipalities. In total, 45 people participated in the workshop including trustees of the communities and other community representatives (3-5 people from each community). Between the 28th and 30th of September 2011, the INRMW program team organized workshops on the prioritization of environmental and natural resources management problem with target communities in the Telavi and Akhmeta municipalities. In total, 53 people participated in the workshops including trustees of the communities (territorial units) and other community representatives - 3-5 people from each community (see Annex 1-3);
- On 15 December 2011, the INRMW program team held a meeting in Telavi with representatives of businesses located in the Telavi municipality to discuss environmental and natural resources management issues in the upstream watershed of the Alazani-Iori River basin. Twenty-nine people participated in the meeting (see Annex 4) ;
- On 2 March 2012, the INRMW program organized a meeting with representatives of business groups and NGOs of the Oni and Ambrolauri municipalities to discuss issues related to the management of natural resources in the upstream pilot watershed area of the Rioni River basin. Twenty-one people participated in the meeting;
- On 21 June 2012, the INRMW program team held a meeting with target communities located in the Oni and Ambrolauri municipalities to identify and prioritize actions for the upper Rioni River watershed management plan. Thirty-five people participated in the workshop including representatives of the local

and regional governments, community trustees and other community representatives;

- On 28 June 2012, the INRMW program held meeting with targeted communities located in the Telavi and Akhmeta municipalities to prioritize actions for the upper Alazani watershed management plan. Forty people participated in the workshop including trustees of the communities, community leaders and the INRMW program team;
- On the 3rd and 4th of July 2012, the INRMW program organized a workshop in Signaghi on the prioritization of environmental and natural resources management problem with target communities located in the lower Alazani-lori watersheds to identify priority issues concerning the Dedoflistskaro municipality. Forty-two people participated in the workshop; .
- On 5 July 2012, the INRMW program held a meeting with business groups and NGOs from the Dedoflistskaro municipality to discuss issues related to the management of natural resource of the lower Alazani-lori pilot watershed area. In total, 25 people participated in the meeting;
- On 6 July 2012, the INRMW program held a meeting with the local government of the Dedoplistskaro municipality to discuss environmental and natural resource management issues. In total, 35 people participated in the workshop;
- On the 25th and 26th of July 2012, the INRMW program team organized a workshop in Grigoleti to prioritize environmental and natural resources management problems in the lower Rioni pilot watershed area. In total, 35 representatives from target communities of the Senaki and Khobi municipalities participated in the meeting (see Annex 5);
- On 26 July 2012, the program held a meeting with business groups and NGOs from the Senaki and Khobi municipalities to discuss issues related to the management of natural resources in the lower Rioni pilot watershed area. In total, 28 people participated in the meeting;
- On 27 July 2012, the INRMW program organized a consultation meeting with the local and regional governments of the Samegrelo-Zemo Svaneti Region to hear the government's opinion on natural resources management issues in the lower watershed of the Rioni River basin. In total, 30 people participated in the workshop including representatives of the local and regional authorities, trustees and other representatives of the target communities (see Annex 6);
- On 23 August 2012, the program held a workshop to validate priority issues in the lower Alazani-lori pilot watershed with local authorities of the Dedoplistskaro municipality. The priority issues were identified through consultations with local communities and experts' assessments. In total, 32 people participated in the workshop including representatives of the local and regional authorities, trustees and other representatives of the target communities;
- On 31 August 2012, the program held a workshop in Grigoleti to validate Lower Rioni pilot watershed priority issues with the Senaki and Khobi local authorities to receive the local stakeholders' final agreement on the priority issues identified through community consultations and expert assessments. In total, 35 people participated in the workshop including local and regional authorities, trustees and other

representatives of the communities (see Annex 7);

- On 13 September 2012, the program team held a meeting in Anaklia with targeted communities of the Senaki and Khobi municipalities to prioritize actions for the lower Rioni watershed management plan. In total, 37 people participated in the workshop including local and regional governments, trustees of the communities and other representatives of the communities;
- On 21 September 2012, the program held a meeting with targeted communities of the Dedoplistskaro municipality to prioritize watershed management actions for the lower Alazani-Iori River basin. In total, 34 people participated in the workshop including the local and regional government, community trustees and other community representatives.

In total, the INRMW program organized 36 meetings with local authorities and communities during Y1 and Y2 as participatory planning activities. These activities included:

- 12 events with the participation of target communities on the identification of issues and opportunities for sustainable use of natural resources in the upstream and downstream pilot watershed areas;
- 8 events with the participation of business groups and CSOs on identification of issues and opportunities for sustainable use of natural resources in the upper and lower pilot watershed area ;
- 4 events on alignment of priority issues identified by the communities in the target pilot watershed areas with municipal and regional-wide priorities;
- 8 events on the identification of community priority actions in the upper and lower pilot watershed areas;
- 4 events on the alignment of priority actions identified by the target communities with municipal and regional-wide priorities.

1.3. Capacity building

1.3.1. Community empowerment through the establishment of CIGs and CBOs

Capacity building of community organizations is one of the INRMW program's objectives. The program promotes the establishment of community initiative groups (CIGs), the establishment and legal registration of community based organizations (CBOs), the capacity building for CIGs and GBOs through training and consultations, and the engagement of CIGs and GBOs in the development and implementation of small grant projects. To achieve the above, the program carried out the following activities during the reporting period:

The CARE program team organized community meetings aimed at establishing CIGs. In 2011, meetings were held in six communities of the upstream watershed areas to include Khidikari and Znakva communities in the Ambrolauri municipality and Kvemo Alvani, Zemo Alvani, Matani and Kistauri communities in the Akhmeta municipality. In 2012, the INRMW program held community meetings in all communities of

upstream and downstream watershed areas. During the meetings, the CARE team introduced the INRMW program's objectives and opportunities for cooperation between the program and the communities. Then, the INRMW program presented each community's survey results to the participants and held discussions regarding environment and natural resources management problems in the communities.

Community representatives expressed their interest in participation in the program. The representatives elected CIG members as focal points for cooperation with the INRMW program, and the CIGs include representatives from all villages of each community. The meeting participants nominated persons they trust the most as members of CIGs. Community representatives confirmed their support for the CIGs with signatures in the meeting minutes. In total, 58 CIGs were established in the reporting period in all watershed areas.

CBOs must be registered as legal entities—nonprofit organizations according to Georgian law—before the CBOs could implement grant projects initiated by the communities. In the reporting period, legal CBO entities were registered in ten communities including:

- Sheubani community (Oni municipality) – “Development Center of Sheubani”;
- Glola community (Oni municipality) – “Glola 2011”
- Tsedisi community (Oni municipality) – “Tsedisi 2012”;
- Khidikari community (Ambrolauri municipality) – “Development Center of Khidikari”;
- Znakva community (Ambrolauri municipality) – “Znakva-2012” ;
- Zemo Alvani community (Akhmeta municipality) – “Zemo Alvani XXI”;
- Kvemo Alvani community (Akhmeta municipality) – “Kvemo Alvani- XXI”;
- Matani community (Akhmeta municipality) – “Matani XXI”;
- Kistauri community (Akhmeta municipality) – “Kistauri XXI”;
- Rurispiri community (Telavi municipality) – “Ruispiri XX I”.

1.3.2. Community empowerment through capacity building of CIGs and CBOs

Between December 2011 and January 2012, the INRMW program prepared training thematics for the CIG members, established processes for selecting the trainers and began to prepare training modules.

The program identified two qualified trainers and hired them. The selection criteria for the trainers included their qualification, knowledge of roles and functions of governmental and non-governmental institutions, experience in this sector and communication and presentation skills.

The INRMW program selected training themes that best meet the basic capacity development needs of newly established CIGs and CBOs so that they could independently identify their community's priority problems, prepare and present grant proposals and later manage the approved projects, mobilize

communities and promote their projects to the local population and local authorities.

The following topics were chosen for the training course “Basics of CBO management”:

- Basics of local self-governance;
- Role of civil organizations, their management and legal frameworks that govern them;
- Community problem identification and prioritization;
- Advocacy;
- Project design and management;
- Fundraising;
- Verbal and non-verbal communication, presentation skills and communication strategy.

The training module requires three days to complete. The program team decided to host 20-24 community representatives for each session of the training course so that three members could be invited from each CIG.

In February 2011, the INRMW program organized the training course “The basics of CBO Management” for 14 CIGs (Znakva, Tsesi, Nikortsminda, Sadmeli, Bugeuli, Likhetai, Khidikari, Tcheliaghele, Ghari, Glola, Utsera, Tsedisi, Sheubani, Sakao) from municipalities of the upstream watershed area of the Rioni River basin (Ambrolauri and Oni municipalities) and for 16 CIGs (Napareuli, Ruispiri, Pshaveli, Tsinandali, Kisiskhevi, Ikalto, Gulgula, Laliskuri, Matani, Sakobiano, Kistauri, Kvemo Alvani, Zemo Alvani, Tusheti, Jokolo, Ozho) from municipalities of the upstream watershed area of the Alazani-Rioni River basin (see Annexes 8-9).

In July 2012, the INRMW program organized trainings for CIGs of 12 communities (Sabatlo, Pirosmeni, Samtatskaro, Zemo Kedi, Kvemo Kedi, Arkhiloskalo, Samreklo, Khornabudji, Gamarjveba, Ozaani, Zemo Machkhaani, Arboshiki) from Dedoplistskaro municipality located in the downstream watershed area of the Alazani-Rioni River basin and one CIG from Akhmeta municipality (Karsistskali) (see Annex 10).

In August 2012, the INRMW program organized trainings for 11 communities (Ledzamadze, Dzveli Senaki, Akhalsopeli, Gedjeti, Nosiri, Nokalakevi, Teklati, Zana, Potskho, Zemo Tchaladidi, Menji) of the Senaki municipality and four communities (Sagvichio, Tchaladidi, Shavghela, Patara Poti) of Khobi municipality located in the downstream watershed area of the Rioni River basin (see Annex 11).

In total, 180 members of 59 CIGs improved their skills by participating in the first stage training. Member of Ghebi CIG from Oni municipality could not attend the training because of bad weather conditions. Each training lasted for three days for communities in each municipality. In total, the program engaged in training activities for 24 days during the reporting period.

The training used interactive methods and participants were actively engaged in the process. Participants stated that topics related to project design and management, communication and presentation skills, advocacy and fundraising were the most interesting.

Participants added that the training will significantly improve their ability to cooperate with the population and authorities, to mobilize the community and to prepare project proposals. For the next stage of training, the participants proposed the following themes: community’s economic development, strategic planning of community development and fundraising.

In the beginning of May 2012, the INRMW program held a one-day awareness raising seminar about

natural resources management entitled “Integrated Natural Resources Management” for community representatives from target municipalities of the upstream watershed areas. Global Waters for Sustainability (GLOWS) consortium members organized the training in partnership with USDoI-ITAP, and the training aimed to raise awareness about integrated natural resources and watershed management for representatives of target communities including community trustees and selected CBO and CIG members. The training was held on 2 May 2012 in Hotel “Old Telavi” for communities in the Alazani-Iori River basin upstream watershed area and on 15 March 2012 for communities from the upstream watershed area of the Rioni River basin.

All INRMW program partners participated in the training which covered the following topics:

- Integrated natural resources planning and management at the watershed level. Facilitator: Irakli Kobulia, CENN; Co-facilitator: Eliso Barnovi, ROFIU-GE;
- Natural resources management and protected areas: community engagement in the management of protected areas. Facilitator: Paata Shanshiashvili, USDoI-ITAP;
- Disasters risk reduction (DRR) from natural disasters, climate adaptation and mitigation, and best examples of risk reduction. Facilitator: Irakli Kobulia, CENN;
- Renewable energy resources and energy efficiency. Facilitator: Paata Gagnidze, WI;

After the training, participants stated that the training topics were important and that the information provided through the training was easy to understand. Forty-eight persons participated in the above training.

1.3.3 Capacity building of local authorities

In parallel with capacity development for local communities, the INRMW program worked to build the capacity of target municipalities through trainings and technical assistance. To improve capacity, UNESCO prepared and organized a 5-days training course in Water Safety Planning. The course targeted local municipalities, water companies and other stakeholders.

The goal of the course was to introduce water safety planning concepts and processes developed by the World Health Organization and the International Water Association. Fourteen representatives of the target municipalities and 15 representatives of water companies participated in the training course. Upon completion of the course, all participants were awarded certificates.

1.3.4. Identification and support of community initiatives

As a result of meetings with community representatives, local authorities and other stakeholders, the INRMW program identified small grant project ideas and prepared project proposals for these ideas. The INRMW program’s Field Operations’ Coordinators, Community Mobilizers and Project Engineer cooperated intensively with community members, CIGs and CBOs in the process of identifying projects and preparing project proposals.

During Y1-Y2, the INRMW program prepared nine project proposals for Khidikari and Znakva communities in the Ambrolauri municipality, Sheubani, Tsedisi and Glola communities in the Oni municipality, Kistauri, Zemo Alvani and Kvemo Alvani communities in the Akhmeta municipality and Ruispiri community in the Telavi municipality. Implementation of four small grant projects started in Y2. The INRMW program organized trainings on project management, environmental compliance and accounting rules and reporting for representatives of these communities prior to the projects' initiation.

2. ACHIEVEMENTS

During the Y1-Y2 reporting period (April 2011-September 2012), the program achieved the following results to promote the empowerment of target communities and local authorities:

- Contact persons (7) were identified in each of the target municipalities;
- 670 persons participated in the community survey; the survey included 270 women and 206 villages located in 108 communities;
- 60 communities with a total population of 90,496 residents were selected by the program for engagement;
- 750 persons, among them 320 women, participated in developing integrated natural resources management plans to include problem identification, problem prioritization and activity prioritization processes;
- Community meetings were held and CIGs were established in 58 communities; the CIGs were created to be the focus of cooperation with the INRMW program, and in 2 communities, the population intended to cooperate with the INRMW through existing CIGs;
- CBOs were legally registered in 10 communities;
- 180 representatives, among them 95 women, from 58 communities participated in trainings on local self-governance, the role of civil organizations, community problem identification and prioritization, advocacy, lobbying for community interests and project design and management;
- 48 participated in trainings designed to raise awareness on integrated natural resources management issues;
- 12 representatives of target municipalities and water companies participated in the training course on water safety;
- Small grant project proposals were prepared for 9 communities in upstream watersheds of the Alazani-Iori and Rioni River basins;
- 36 meetings with local authorities and communities were held during Y1 and Y2 as participatory planning activities;
- 685 community representatives were actively engaged in the program during the reporting period.

3. NEXT STEPS

According to the Y3 work plan, program activities related to the empowerment of local communities and authorities will focus on the following:

- Providing training for local authorities and communities on the integration of environmental, climate and DRR considerations into strategic and local budget planning (seven events). CENN and CARE will conduct these training sessions jointly. CARE will mobilize stakeholders and organize the logistics while CENN will prepare the content and conduct the trainings;
- Organizing face-to-face meetings with communities and authorities.

During Y3, the program will focus on finalizing and promoting the Watershed Plans. Watershed Plans will be presented to local as well as national stakeholders in the second/third quarters of Y3. The INRMW program will organize a number of joint conferences with donors and regional governments in the regional centers of the pilot watershed areas during the third and fourth quarters of Y3.

Roughly eight meetings with local authorities and communities will be held during Y3 including but not limited to:

- Presentations of the watershed plans to local communities and authorities (four events, one in each pilot watershed area);
- Nationwide presentation of watershed plans (one event); and
- Donor conferences (three events, one in each region of the pilot watershed area).

FIU will organize the nationwide presentation and CARE will organize the others.

ANEXSES 1-11

Annex 1

Meetings with representatives of selected communities of Upper Rioni Pilot Watershed Area

Agenda

20-22 September 2011, Ambrolauri-Oni

Meetings were organized by of GLOWS consortium members - **Representative Office of Florida International University in Georgia** (ROFIU-GE) and **CARE International in Caucasus** (CARE)

The purpose of community meetings was to identify and prioritize natural resources and environmental issues in selected communities

20 September, Ambrolauri

12.00-12.15 Registration

12.15-13.45 Welcome and Introduction

- GLOWS/INRMW Program overview and introduction by ROFIU-GE representative
- Presentation of results on identification of target communities by CARE

13.45-14.00 Brief on local communities/villages by CARE

14.00-14.15 Presentation & introduction of *Prioritization Matrix and Methodology* by ROFIU-GE representative

14.15-15.00 Work in groups, facilitated by ROFIU-GE and CARE

15.00-15.15 Break

15.15-16.15 Presentations by groups

16.15-16.30 Wrap up session by ROFIU-GE representative

16.30-17.30 Dinner

21 September, Ambrolauri

09.45-10.00 Registration

10.00-10.45

- Introduction of goals of GLOWS/INRMW Program and the meeting by ROFIU-GE

- representative
- Presentation of results on identification of target communities by CARE

10.45-11.00 Brief on local communities/villages by CARE

11.00-11.15 Presentation & introduction of *Prioritization Matrix and Methodology* by ROFIU-GE representative

11.15-12.00 Group work, facilitation by ROFIU-GE and CARE

12.00-12.15 Break

12.15-13.00 Presentations by groups

13.00-13.15 Wrap-up session by ROFIU-GE representative

13.15-14.00 Dinner

22 September, Oni

09.45-10.00 Registration

10.00-10.46 Introduction

- Introduction of goals of GLOWS/INRMW Program and the meeting by ROFIU-GE representative
- Presentation of results on identification of target communities by GLOWS/CARE

10.45-11.00 Brief on local communities/villages by CARE

11.00-11.15 Brief on local communities/villages by CARE

11.15-12.00 Groups Work, Facilitation by ROFIU-GE and CARE

12.00-12.15 Break

12.15-13.00 Presentations by groups

13.00-13.15 Wrap-up by ROFIU-GE representative

13.15-14.00 Dinner

Annex 2

Meeting with local authorities of Upper Rioni Pilot Watershed area

Ambrolauri, 04 November, 2011

Meeting was organized by of GLOWS consortium members - **Representative Office of Florida International University in Georgia** (ROFIU-GE) and **CARE International in Caucasus** (CARE).

The purpose of the meeting with local authorities was to discuss environmental and natural resources related problems of target communities together with municipal and watershed level issues

Agenda

10.00-10.15 Registration

10.15-10.25 Introduction, Opening by Nana Kvrivishvili, Governance Officer CARE

10.25-10.35 INRMW Program Overview- Presentation by Mariam Shotadze, ROFIU-GE

Program Director

10.35-10.45 Introduction of communities identification results by Nino Kikabidze, Field Coordinator, CARE

10.45-11.00 Prioritized issues of selected communities - Presentation by Eliso Barnovi, INRMW Program Deputy Director, ROFIU-GE

11.00-12.00 Discussion on environmental and natural resource management related problematic issues of selected communities, municipalities and the region.

12.00-12.15 Wrap-up session by CARE and ROFIU-GE representatives

List of Participants

#	Name	Municipality, Territorial Unit, Position	Contacts
1	Nino Jmukhadze	Trustee of Nikortsminda Community	595 33 45 42

24	Mariam Bakhtadze	INRMW Basin Energy Analyses Team Leader, Winrock International	mbakhtadze@winrocknateli.org 599 19 30 91

Summary of Discussion

Priority issues identified by target communities are in line with municipal and regional plans. Almost all villages of target communities as well as the cities of Ambrolauri and Oni face the problem of proper waste disposal. In cities, waste collection issue is more or less solved. In villages, however, there is no controlled waste collection and disposal. Waste problem is very acute in v. Nikortsminda and resort areas, especially during summer time. Sewage collection and treatment is acute problem in resort areas as well. Storm water drainage systems should be built and/or rehabilitated in rural areas of pilot watershed area.

Annex 3

Meeting with local authorities of Upper Alazani Pilot Watershed Area

Telavi 11 November, 2011

Meeting was organized by of GLOWS consortium members - **Representative Office of Florida International University in Georgia** (ROFIU-GE) and **CARE International in Caucasus** (CARE).

The purpose of the meeting with local authorities was to discuss environmental and natural resources related problems of target communities together with municipal and watershed level issues

Agenda

12:00 -12:15 Registrations

12:15-12:25 Introduction. Opening by Nana Kvrivishvili, Local Governance Officer CARE

12:25- 12:35 INRMW Program Overview - presentation by Mariam Shotadze, INRMW Country Program Director, ROFIU-GE

12:35-12:45 Introduction of results on identification of communities – presentation by Shorena Chapurishvili, Community Mobilizer, CARE

12:45-13:00 Presentation on prioritized community issues – presentation by Eliso Barnovi, INRMW Program Deputy Director, ROFIU-GE

13:00-14:00 Discussion on environmental and natural resource management related problems of selected communities, target municipalities and the region as a whole

14:00-14:15 Wrap-up session by ROFIU-GE and Care representatives

31	Mariam Shotadze	INRMW County Program Director, ROFIO-GE	593 32 84 46

Summary of Discussion

Issues identified as top priorities by selected communities are in line with municipal and regional-wide plans. Waste management problem especially, proper disposal of solid household wastes is a widespread issue in the pilot watershed area. Waste recycling and reuse capacities at the municipal or regional level should be developed. Landslides, mudflows and flash floods are also among the highest priorities. The problem of dry ravines is huge in village Kisiskhevi as well as in the entire upper Kakheti. Rivers on Tsivgombori are scarce in water. During heavy rains, flash floods and mudflows occur that impose high threats to settlements and infrastructure. Deforestation is significant problem in Akhmeta. Forests are intensively cut at river sources that increase landslide risks and cause reduction in water resource.

Annex 4

Meeting with Business sector representatives of Telavi and Akhmeta Municipalities

Telavi , 15 December, 2011

Meeting was organized by of GLOWS consortium members - **Representative Office of Florida International University in Georgia** (ROFIU-GE) and **CARE International in Caucasus** (CARE).

The purpose of the meeting with local business representatives was to discuss issues related to natural resource utilization, current business practices and opportunities for green growth/sustainable use of natural resources by business sector

Agenda

12:00 - Welcome speech and introduction of meeting objectives by Nana Kvrivishvili , Governance Officer, CARE

12:05 - 12:12- Project brief overview by Mariam Shotadze, INRMW-Georgia Country Program Director, ROFIU-GE

12:15-14:00- Discussion facilitated by ROFIU-GE representatives

Topics for discussion

1. Water-related issues: Water quantity, quality; taxes, conflict between various users, water efficiency
2. Forest resources related problems: Control of illegal cuttings by licensee, forest inventory, timber cuts methods, erosion, forest cut on slope areas, taxes, population dissatisfaction/concern, impacts on other resources, land, biodiversity etc.
3. Fishing-related problems: Water quality, illegal fishing, expensive credits
4. Hunting-related problems: Illegal hunting, establishment and management of
5. Mineral resources extraction issues: Administrative barriers, extraction practices, environmental controls, influence environment and other resources.
6. Tourism business related problems: Expensive credit, food and utility related high expenses, deficit of electricity and heating, lack of clients, waste disposal problems, water and sanitation
7. Agriculture related problems: Expensive credit, outmoded mechanization, pests, lack of fertilizer/fertilizing over dosage , relevant irrigation, climate change, soil erosion, presence of weak market chain for agriculture produce
8. Others

Summary of Discussion

Akhmeta municipality has relatively clean environment and untouched ecosystems, cause it is not densely populated area. Therefore, it has a potential for production of ecologically clean products. However, receiving organic certification is costly and lengthy procedure and there is still very low demand for organic products in Georgia.

Tush sheep is unique in terms of its taste. However, sheep breeding has its negative impacts on protected areas based tourism. Sheep grazing as well as its migration causes severe land erosion. Shepherd houses are very close to villages, located in traditional use area of Tusheti protected areas. Pasture areas are not delineated from other lands and sheep is grazed virtually everywhere. There is no pasture rotation or other sustainable method used by shepherds. As a result, mountainous ecosystems in grazing areas are significantly degraded. Invasive species are spread in many areas within the territory of Tusheti PA, because of overgrazing. It is of utmost importance to develop a management plan for Tusheti protected landscape that will allow for sustainable utilization of natural resources there.

Regarding the ecotourism, guesthouses in many villages of Tusheti do not have water supply and sanitation systems. Energy access is very limited, due to absence of on-grid and off-grid power plants and centralized

gas supply. Therefore, installation of micro-scale clean energy technologies in villages of Omalo community can be considered as a way for improving the access to rural energy. Solar heating systems, photovoltaics, high-efficient stoves, briquettes and/or wood pellet technologies can be introduced there. There is a small-scale business in Akhmeta municipality producing about 300-400 high-efficient wood stoves and interest for expansion of this business is present. Wood pellets are also produced by several timber and hazelnut producing companies.

Waste collection and disposal is a huge problem in Tusheti. Furthermore, given the area is far from the densely populated settlements, food supply for tourists is very poor. Thus, introduction of vacuum technologies can be considered as a measure for resolving this issue.

Regarding the water supply, the area is rich in water. However, due to the obsolescence of existing water supply and irrigation systems, there are high losses in existing networks. Rehabilitation of these systems will enhance water efficiency and availability. There will be also lower competition between drinking and irrigation water users during irrigation seasons.

Concerning the extraction of natural resources, the region is rich in construction materials. This business can be expanded and it may have positive impact on flood-retention function of many rivers.

Annex 5

Workshop on Identification of Priority Issues by Selected Communities, Lower Rioni Pilot Watershed Area

25 July 2012

Grigoleti, Hotel Andamati

The workshop is organized by GLOWS consortium members - **Representative Office of Florida International University in Georgia** (ROFIU-GE) and **CARE International in Caucasus** (CARE)

The purpose of the Priority Watershed Issues Identification Workshop was to identify and prioritize natural resources and environmental problematic issues in selected communities.

Participants - Trustees and representatives of selected communities of Khobi and Senaki Municipalities, INRMW program team.

Agenda

12.00-12.30 Registration

12.30-13.00 Welcome and Introduction

GLOWS/INRMW Program overview and introduction by ROFIU-GE representative

13.00-13.30 Presentation of results on identification of target communities by CARE

13.30-14.00 Presentation & introduction of *Prioritization Matrix and Methodology* by ROFIU-GE representative

14.00-15.00 Break

15.00-16.30 Work in groups (3 to 4 groups), facilitated by ROFIU-GE and CARE

16.30 -17.30 Presentations by groups

17.30-18.00 Wrap up session and closing remarks

Summary of Discussion

The most acute problem in all target communities of Khobi Municipality is flooding of agricultural lands due to damages or not existence of drainage system. Drainage systems should be built and/or rehabilitated in the communities of Khobi Municipality - Shavgele, Patara Poti, Sagvichio and Chaladidi.

There is no water supply system in almost all villages of Senaki target communities. Population have their own boring wells in the houses. Such method of water supply does not meet modern standards and also causes reduction in water resources time by time.

The fall webworm is the highest problem in both Municipalities. The fall webworm feeds on just about any type of deciduous trees and plants, where leaves are chewed. As a result agricultural production is being damaged and destroyed. Pilot projects can be funded by the program using biological preparations against fall webworm.

The damages caused by heavy winds is also acute problem in target communities. There are no windbreaks to protect agricultural lands and production.

The common problem for the communities of Khobi and Senaki is waste disposal. There is no controlled waste collection and disposal. Population collect and throw it in the yards, in cesspools. As a result lands is being polluted and this is mostly danger for population using drinking water from boring wells

Meeting with local authorities of Senaki and Khobi Municipalities

27 July, 2012

Samegrelo-Zemo Svaneti Regional Administration, Zugdidi

The purpose of the meeting with local authorities is to discuss environmental and natural resources related problems of target communities together with municipal and watershed level issues and assure their adherence with municipal and regional priorities.

Agenda

12.00-12.10 Opening by CARE

12.10-12.30 INRMW Program Overview - Presentation by Mariam Shotadze, ROFIU-GE

Program Director

12.30-13.00 Q&A

13.00-13.30 Introduction of communities identification results by field staff, CARE

13.30-14.00 Prioritized issues of selected communities - Presentation by Eliso Barnovi, INRMW Program Deputy Director, ROFIU-GE

14.00-14.45 Discussion on environmental and natural resource management related problematic issues of selected communities, municipalities and the region.

14.45-15.00 Wrap-up and closing remarks

Summary of Discussion

Representatives of Khobi Municipality mentioned that the most acute and priority problem in all target communities (Shavgele, Sagvishio, Chaladidi and patara Poti) as well as in whole Municipality is flooding of agricultural lands. The same problem is also high priority for the communities of Senaki Municipality – in Akhalsopeli, Zemo Chaladidi and Teklari. To solve this problem it is necessary to rehabilitate drainage system or make installation of a new system.

There is no water supply system in almost all villages of Senaki communities. Population have their own boring wells in the yards. Such method of water supply does not meet modern standards and also causes reduction in water resources time by time. Representatives of Senaki Municipality gave high priority to water supply system rehabilitation in the communities where water source debit is high - in Ledzadzame and Akhalsopeli. As for resort Menji, there is damaged water supply system, that needed rehabilitation works, but system currently is not in anyone's balance.

Workshop participants agree that in August INRMW program engineer together with community mobilizer and will start working on the technical part of the small grant projects in the target communities.

Khobi and Senaki Municipalities have their own community development plans and priority issues identified by target communities should be in line with municipal plans.

Regional development plan will be provided soon.

Local authorities express willingness to implement joint projects with INRMW program and make their contributions as needed.

Annex 7

Priority Issues Validation Workshop for Pilot Territories of the River Rioni Lower Watershed Area, 31 August 2012

Samegrelo-Zemo Svaneti Regional Government, Zugdidi

Priority Issues Validation workshop is organized by of GLOWS consortium members: **Representative Office of Florida International University in Georgia** (ROFIU-GE) and **CARE International in Caucasus** (CARE)

The purpose of the Priority Issues Validation Workshop is to solicit an agreement from local authorities on the priority issues of natural resource integrated management

Agenda

Participants - Local authorities – Representatives of Regional Governor’s Office and Executive and Representative bodies of Khobi-Senaki municipality , USAID, INRMW program team

12.00-12.15 Welcoming by ROFIU-GE and Care, introduction of participants

12.15-13.15 Presentation of watershed issues prioritized by local communities and INRMW program

13.15-13.50 Q&A, discussion

13.50-14.00 Wrap-up

List of Invitees

Name/Title
Guram Misabishvili – State representative-Governor
David Darcmelidze – Deputy Governor
