AIDS stands for **Acquired Immune Deficiency Syndrome**. The human body has an immune system that helps to protect it from diseases. It recognizes harmful infection in the blood, then attacks and destroys them.

This new virus called **HIV** destroys the immune system and leaves the body defenseless. It is called the **HIV Virus**; short for **Human Immunodeficiency Virus**.

You can get **AIDS** by having intimate sexual contact with someone who has the virus or by blood exposure. Like intravenous drug users who share the same needle.
