

ELEVENTH JUDICIAL CRIMINAL MENTAL HEALTH PROJECT Program Summary

The Eleventh Judicial Circuit Criminal Mental Health Project (CMHP) was established in 2000 to divert individuals with serious mental illnesses (SMI; e.g., schizophrenia, bipolar disorder, major depression) or co-occurring serious mental illnesses and substance use disorders away from the criminal justice system and into comprehensive community-based treatment and support services. The CMHP provides an effective, cost-efficient solution to a community problem and works by eliminating gaps in services, and by forging productive and innovative relationships among all stakeholders who have an interest in the welfare and safety of one of our community's most vulnerable populations.

Short-term benefits include reduced numbers of defendants with SMI in the county jail, as well as more efficient and effective access to housing, treatment, and wraparound services for the individuals re-entering the community. This decreases the likelihood that individuals will re-offend and reappear in the criminal justice system, and increases the likelihood of successful mental health recovery. The long term benefits include: reduced demand for costly acute care services in jails, prisons, forensic mental health treatment facilities, emergency rooms, and other crisis settings; decreased crime and improved public safety; improved public health; decreased injuries to law enforcement officers and people with mental illnesses; and decreased rates of chronic homelessness. Most importantly, the CMHP is helping to close the revolving door which results in the devastation of families and the community, the breakdown of the criminal justice system, and wasteful government spending.

Impact to the Community

Everyday, in every community in the United States, law enforcement agencies, courts, and correctional institutions are witness to a parade of misery brought on by untreated or under-treated mental illnesses. Last year, roughly 2.2 million admissions to local jails in the United States involved people with SMI. Roughly, three-quarters of these individuals also experience co-occurring substance use disorders which increase their likelihood of becoming involved in the justice system. On any given day, there are 750,000 people with mental illnesses incarcerated in jails and prisons across the United States and 1.25 million people with mental illnesses are on probation in the community.

Although these national statistics are alarming, the problem is even more acute in Miami-Dade County which is home to the largest percentage of people with SMI of any urban community in the United States. Roughly 9.1% of the population in Miami-Dade County (175,000 adults) experiences SMI, yet only 1% of the population (24,000 adults) receives treatment in the public mental health system. As a result, police officers have increasingly become the first, and often only, responders to people in crisis due to untreated mental illnesses. Too often, these encounters result in the arrest and incarceration of individuals for criminal offenses that are directly related to individuals' psychiatric symptoms or life-health contexts (e.g., homelessness, addiction, poverty).

The Miami-Dade County jail currently serves as the largest psychiatric institution in Florida and contains nearly half as many beds serving inmates with mental illnesses as all state civil and forensic mental health hospitals combined. Of the roughly 114,000 bookings into the jail last year, nearly 20,000 involved people with mental

illnesses requiring intensive psychiatric treatment while incarcerated. On any given day, the jail houses approximately 1,200 individuals receiving psychotherapeutic medications, and costs taxpayers roughly \$60 million annually, more than \$160,000 per day. Additional costs to the county, the state, and taxpayers result from crime and associated threats to public safety; civil actions brought against the county and state resulting from injuries or deaths involving people with mental illnesses; injuries to law enforcement and correctional officers; ballooning court case loads involving defendants with mental illnesses; and uncompensated emergency room and medical care.

On average, people with mental illnesses remain incarcerated eight times longer than people without mental illnesses arrested for the exact same charge, at a cost seven times higher. With little treatment available, many individuals cycle through the system for the majority of their adult lives.

The Eleventh Judicial Circuit Criminal Mental Health Project (CMHP) was established ten years ago to divert nonviolent misdemeanor defendants with SMI, or co-occurring SMI and substance use disorders, from the criminal justice system into community-based treatment and support services. Since that time the program has expanded to serve defendants that have been arrested for less serious felonies and other charges as determined appropriate. The program operates two components: pre-booking diversion consisting of Crisis Intervention Team (CIT) training for law enforcement officers and post-booking diversion serving individuals booked into the jail and awaiting adjudication. All participants are provided with individualized transition planning including linkages to community-based treatment and support services.

The CMHP's success and effectiveness depends on the commitment of stakeholders throughout the community. Such cross-system collaboration is essential for the transition from the criminal justice system to the community mental health system. Program operations rely on collaboration among community stakeholders including: the State Attorney's Office, the Public Defender's Office, the Miami-Dade County Department of Corrections and Rehabilitation, the Florida Department of Children and Families, the Social Security Administration, public and private community mental health providers, Jackson Memorial Hospital-Public Health Trust, law enforcement agencies, family members, and mental health consumers.

Pre-Booking Jail Diversion Program

The CMHP has embraced and promoted the Crisis Intervention Team (CIT) training model developed in Memphis, Tennessee in the late 1980's. Known as the *Memphis Model*, the purpose of CIT training is to set a standard of excellence for law enforcement officers with respect to treatment of individuals with mental illnesses. CIT officers perform regular duty assignment as patrol officers, but are also trained to respond to calls involving mental health crisis. Officers receive 40 hours of specialized training in psychiatric diagnoses, suicide intervention, substance abuse issues, behavioral de-escalation techniques, the role of the family in the care of a person with mental illness, mental health and substance abuse laws, and local resources for those in crisis.

The training is designed to educate and prepare officers to recognize the signs and symptoms of mental illnesses, and to respond more effectively and appropriately to individuals in crisis. Because police officers are often first responders to mental health emergencies, it is essential that they know how mental illnesses can impact the behaviors and perceptions of individuals. CIT officers are skilled at de-escalating crises involving people with mental illnesses, while bringing an element of understanding and compassion to these difficult situations. When appropriate, individuals in crisis are assisted in accessing treatment facilities in lieu of being arrested and taken to jail.

The pre-booking diversion program has demonstrated excellent results. To date, the CMHP has provided CIT training, free of charge, to roughly 4,000 law enforcement officers from all 36 local municipalities in Miami-Dade County, as well as Miami-Dade Public Schools and the Department of Corrections and Rehabilitation.

Countywide, CIT officers respond to 16,000 mental health crisis calls per year. Last year alone, CIT officers from the Miami-Dade Police Department and City of Miami Police Department responded to more than 10,000 calls, resulting in over 1,200 diversions to crisis units and just 9 arrests. Over the past four years, these two agencies have responded to nearly 38,000 mental health crisis calls resulting in almost 9,000 diversions to crisis units and just 85 arrests.

As a result of CIT, the average daily census in the county jail system has dropped from 7,800 to 4,800 inmates, and the county has closed one entire jail facility at a cost-savings to taxpayers of \$12 million per year. There has also been a dramatic reduction in fatal shootings and injuries of people with mental illnesses by police officers. From 1999 through 2005 there were nineteen persons with mental illness that died as the result of altercations with law enforcement officers in Miami-Dade County. Since 2005, this figure has dropped significantly.

Post-Booking Jail Diversion Program

The CMHP was originally established in 2000 to divert nonviolent misdemeanor defendants with SMI and possible co-occurring substance use disorders, from the criminal justice system into community-based treatment and support services. In 2008, the program was expanded to serve defendants that have been arrested for less serious felonies and other charges as determined appropriate. Post-booking jail diversion programs operated by the CMHP serve approximately 500 individuals with serious mental illnesses annually. Over the past decade, these programs have facilitated roughly 4,000 diversions of defendants with mental illnesses from the county jail into community-based treatment and support services.

Misdemeanor Jail Diversion Program: All defendants booked into the jail are screened for signs and symptoms of mental illnesses by correctional officers. Individuals charged with misdemeanors who meet program admission criteria are transferred from the jail to a community-based crisis stabilization unit within 24 to 48 hours of booking. Upon stabilization, legal charges may be dismissed or modified in accordance with treatment engagement. Individuals who agree to services are assisted with linkages to a comprehensive array of community-based treatment, support, and housing services that are essential for successful community re-entry and recovery outcomes. Program participants are monitored by CMHP for up to one year following community re-entry to ensure ongoing linkage to necessary supports and services. The vast majority of participants (75-80%) in the misdemeanor diversion program are homeless at the time of arrest and tend to be among the most severely psychiatrically impaired individuals served by the CMHP. The misdemeanor diversion program receives approximately 300 referrals annually. Recidivism rates among program participants has decreased from roughly 75 percent to 20 percent annually.

Felony Jail Diversion Program: Participants in the felony jail diversion program are referred to the CMHP through a number of sources including the Public Defender's Office, the State Attorney's Office, private attorneys, judges, corrections health services, and family members. All participants must meet diagnostic and legal criteria¹ as well as eligibility to apply for entitlement benefits such as Supplemental Security Income (SSI), Social Security Disability Insurance (SSDI), and Medicaid. At the time a person is accepted into the felony jail diversion program, the state attorney's office informs the court of the plea the defendant will be offered contingent upon successful program completion. Similar to the misdemeanor program, legal charges may be dismissed or modified based on treatment engagement. All program participants are assisted in accessing community based services and supports, and their progress is monitored and reported back to the court by CMHP staff. Individuals participating in the felony jail diversion program demonstrate reductions in jail bookings and jail days of more than 75 percent, with those who successfully complete the program demonstrating a recidivism rate of just 6 percent. Since 2008, the felony jail program alone is estimated to have saved the county over 15,000 jail days, more than 35 years.

¹ Legal criteria specify a current most serious charge of a third degree felony, with not more than three prior felony convictions.

Forensic Hospital Diversion Program

Since August 2009, the CMHP has overseen the implementation of a state funded pilot project to demonstrate the feasibility of establishing a program to divert individuals with mental illnesses committed to the Florida Department of Children and Families from placement in state forensic hospitals to placement in community-based treatment and forensic services. Participants include individuals charged with 2nd and 3rd degree felonies who do not have significant histories of violent felony offenses and are not likely to face incarceration if convicted of their alleged offenses. Participants are adjudicated incompetent to proceed to trial or not guilty by reason of insanity. The community-based treatment provider operating services for the pilot project is responsible for providing a full array of residential treatment and community re-entry services including crisis stabilization, competency restoration, development of community living skills, assistance with community re-entry, and community monitoring to ensure ongoing treatment following discharge. The treatment provider also assists individuals in accessing entitlement benefits and other means of economic self-sufficiency to ensure ongoing and timely access to services and supports after re-entering the community. Unlike individuals admitted to state hospitals, individuals served by MD-FAC are not returned to jail upon restoration of competency, thereby decreasing burdens on the jail and eliminating the possibility that a person may decompensate while in jail and require readmission to a state hospital. To date, the pilot project has demonstrated more cost effective delivery of forensic mental health services, reduced burdens on the county jail in terms of housing and transporting defendants with forensic mental health needs, and more effective community re-entry and monitoring of individuals who, historically, have been at high risk for recidivism to the justice system and other acute care settings. Individuals admitted to the MD-FAC program are identified as ready for discharge from forensic commitment an average of 52 days (35%) sooner than individuals who complete competency restoration services in forensic treatment facilities, and spend an average of 31 fewer days (18%) under forensic commitment. The average cost to provide services in the MD-FAC program is roughly 32% less expensive than services provided in state forensic treatment facilities.

Access to Entitlement Benefits

Stakeholders in the criminal justice and behavioral health communities consistently identify lack of access to public entitlement benefits such as Supplemental Security Income (SSI), Social Security Disability Insurance (SSDI), and Medicaid as among the most significant and persistent barriers to successful community re-integration and recovery for individuals who experience serious mental illnesses and co-occurring substance use disorders. The majority of individuals served by the CMHP are not receiving any entitlement benefits at the time of program entry. As a result, many do not have the necessary resources to access adequate housing, treatment, or support services in the community.

In order to address this barrier and maximize limited resources, the CMHP developed an innovative plan to improve the ability to transition individuals from the criminal justice system to the community. Toward this goal, all participants in the program who are eligible to apply for Social Security benefits are provided with assistance utilizing a best practice model referred to as *SOAR (SSI/SSDI, Outreach, Access and Recovery)*. This is an approach that was developed as a federal technical assistance initiative to expedite access to social security entitlement benefits for individuals with mental illnesses who are homeless. Access to entitlement benefits is an essential element in successful recovery and community reintegration for many justice system involved individuals with serious mental illnesses. The immediate gains of obtaining SSI and/or SSDI for these people are clear: it provides a steady income and health care coverage which enables individuals to access basic needs including housing, food, medical care, and psychiatric treatment. This significantly reduces recidivism to the criminal justice system, prevents homelessness, and is an essential element in the process of recovery.

The CMHP has developed a strong collaborative relationship with the Social Security Administration in order to expedite and ensure approvals for entitlement benefits in the shortest time frame possible. All CMHP participants are screened for eligibility for federal entitlement benefits, with staff initiating applications as early

as possible utilizing the SOAR model. Program data demonstrates that 90% of the individuals are approved on the initial application. By contrast, the national average across all disability groups for approval on initial application is 37%. In addition, the average time to approval for CMHP participants is 30 days. This is a remarkable achievement compared to the ordinary approval process which typically takes between 9-12 months.

In November 2010, Miami-Dade County was awarded a 3-year, \$750,000 grant from the State of Florida to implement a collaborative project between the CMHP and the Miami-Dade Corrections and Rehabilitation Department to expand services to include individuals with SMI re-entering the community after completing jail sentences and to implement a specialized entitlement benefits unit utilizing the SOAR model to expedite access to Social Security and Medicaid benefits for individuals served by the CMHP's programs.

Recovery Peer Specialists

Recovery Peer Specialists are individuals diagnosed with mental illnesses who work as members of the jail diversion team. Due to their life experience they are uniquely qualified to perform the functions of the position. The primary function of the Recovery Peer Specialists is to assist jail diversion program participants with community re-entry and engagement in continuing treatment and services. This is accomplished by working with participants, caregivers, family members, and other sources of support to minimize barriers to treatment engagement, and to model and facilitate the development of adaptive coping skills and behaviors. Recovery Peer Specialists also serve as consultants and faculty to the CMHP's Crisis Intervention Team (CIT) training program.

Bristol-Myer Squibb Foundation Project

The South Florida Behavioral Health Network, which is contracted by the Florida Department of Children and Families to manage the substance abuse and mental health system of care in Miami-Dade and Monroe Counties, was awarded a 3-year, \$1.2 million grant from the Bristol-Myers Squibb Foundation to oversee development and implementation of a first-of-its-kind coordinated system of care demonstration project. The project, which serves as an overlay to both the Misdemeanor and Felony Jail Diversion Programs is designed around recommendations from the National Leadership Forum on Behavioral Health/Criminal Justice Services, targets individuals with severe and persistent mental illnesses who are at highest risk for involvement in the criminal justice system and other institutional settings. A primary goal of the project is to ensure timely and efficient access to a comprehensive array of services based on enhanced, individualized assessment of clinical and criminogenic needs and risk factors. Services, which incorporate criminal justice and trauma informed practices, are delivered by a coordinated network of community-based treatment providers and justice system stakeholders involved in cross-systems and cross-disciplinary treatment planning, service coordination, and information sharing. Project evaluation will include comparisons of behavioral health and criminal justice outcomes among individuals enrolled in the newly created system of care and enhanced services to outcomes among individuals participating in traditional community-based services.

***Typical or Troubled?*TM Program**

Recently, the CMHP partnered with the American Psychiatric Foundation (APF) and Miami-Dade County Public Schools (MDCPS) to implement the [*Typical or Troubled?*TM](#) School Mental Health Education Program for all public junior high and high schools in the Miami-Dade system. The program will train over 500 teachers, school psychologists, social workers and guidance counselors on early identification of potential mental health problems, will educate and engage parents and will ultimately link students with mental health services when needed.

*Typical or Troubled?*TM is an educational program that helps school personnel distinguish between typical teenage behavior and evidence of mental health warning signs that would warrant intervention. The program includes culturally sensitive technical assistance for school personnel on best practices and educational materials in English, Spanish and forthcoming in Haitian Creole. To date, the program has been used in over 500 schools and school districts, in urban, suburban and rural areas, and educated more than 40,000 teachers, coaches, administrators, and other school personnel across the country.

This initiative will take a proactive approach to tackle the issue of mental health in schools through partnerships and targeted training that hone in on the identification and effective treatment of mental health problems before those problems manifest through increased truancy, substance abuse, violence or tragedy.

Conclusion

The CMHP has demonstrated substantial gains in the effort to reverse the criminalization of people with mental illnesses. The idea was not to create new services but to merge and blend existing services in a way that was more efficient and continuous across the system.

The Project works by eliminating gaps in services and by forging productive and innovative relationships among all stakeholders who have an interest in the welfare and safety of one of our community's most vulnerable populations.

The CMHP offers the promise of hope and recovery for individuals with SMI that have often been misunderstood and discriminated against. Once engaged in treatment and community support services, individuals have the opportunity to achieve successful recovery, community integration, and reduce their recidivism to jail. The CMHP is a national model of excellence and has received numerous recognitions including the *2010 Prudential Davis Productivity Award for implementation of SOAR*, *2010 Eli Lilly Reintegration Award for Advocacy*, *2008 Center for Mental Health Services/National GAINS Center Impact Award*, the *2007 National Association of Counties Achievement Award*, the *2006 United States Department of Housing & Urban Development's HMIS National Visionary Award*, the *2006 Prudential Financial Davis Productivity Award*, and the *2003 National Association of Counties Distinguished Service Award*.

The CMHP provides an effective and cost-efficient solution to a community problem. Program results demonstrate that individualized transition planning to access necessary community based treatment and services upon release from jail will ensure successful community re-entry and recovery for individuals with mental illnesses, and possible co-occurring substance use disorders that are involved in the criminal justice system.
