INTRODUCTION

The purpose of this programming report is to establish guidelines for the point of discussion, secondly, to serve as a common thread to address and unite the aspirations of the community and needs of the end user and lastly, address the wide range of issues involved in planning, designing and constructing a museum. This report will also establish goals and objectives so that it can be used as an instrument to produce in a coherent scheme between the museum's design and established goals.

The strategy of this report is to review similar structures, establish a classification for the museum, followed by developing goals and objectives, a space program and budget in order to make logical recommendations for the design of the new Virginia Key Beach Museum.

EXECUTIVE SUMMARY

The design of the museum should reflect the expressed intent of the Virginia Key Beach
Park Trust and the various community workshops. The museum is intended to exhibit the history
of African American at Virginia Key and in South Florida, including the civil rights era and the
culture of African and Caribbean Americans. The story of the natural environment of this barrier
island and its relationship to the social events of this place will also be exhibited.

Museums fall into one of four different classifications based on there purpose, nature, quality and collections,. These classification include museums of art and archeology, historical and archival museums, ethnographic and folk museums and museums of physical and natural sciences (technology and educational). With this in mind, the first challenge facing VKBPT may be to narrow the scope of the museum. The initial express aspirations are spread over all four of the classifications. We feel that this subject needs to be further examined and developed in order to allow the museum's mission statement, approach and content be more focused. A final decision will have to be reached before finalizing this programming report.

average square footage of all 9 gurseums rough equals 63,500 SF and the average cost per square

foor equals about \$157.06 per equare foor (\$6,34 million). Note, the above figures apply to

ANALYSIS OF EXISTING MUSEUMS

To take an analytical look at museums and why we have them today, their intention was and is today to highlight the way in which society accumulate, classify and present material objects, creating patterns of practice that reveal innate values and ideas, presented as public culture. Thus the gathering, selection and organization of material objects become a system which society constructs a particular public image of itself.

To turn and dissect the physical make-up of 9 museums which we have broken down and compared by size, location, cost of construction, major spaces and structural systems. The iconography, gallery layouts and the sequence of collections with these buildings together provide a "script" or "circulation code" to be performed by individuals visiting the museum. Found in APPENDIX "A" the breakdown of these facilities show the primary spaces which we have used as starting point for developing our space program. The facilities vary from 18,000 SF and up to 152,000 SF (nearly four football fields). To further examine these examples, the average square footage of all 9 museums rough equals 63,500 SF and the average cost per square foot equals about \$157.06 per square foot (\$6.34 million). Note, the above figures apply to construction costs only and does not include the cost for land acquisition, professional fees and financing. The architectural context of all the structures is unique, monumental and can be considered as a public sculptural element.

The building program began with an evaluation of the basic needs for a museum to provide its members and surrounding community with a structure that will promote and cater a safe, healthy efficient and functional environment. This place will also generally inspire the user to adventure, to share ideas, to learn something new and to gain more historical knowledge. Whether it is a reception, a film or simply a high school art exhibit that has been put together at the new museum, the museum will be a place for the city residence to fuse and speak out about the individual and collective growth of African Americans in South Florida.

In the event of analyzing previous facilities of similar make-up (Appendix "A"), the program could be subdivided among public and private spaces. Public spaces for the use of the common public and/or visitors ranging from meetings, field trips, receptions, leisure educational outing, etc and on to private paces otherwise setting a restricted use, usually by the building personnel such as administration, security and ancillary spaces such as mechanical rooms, electrical rooms, warming kitchen and other storage areas.

Due to the nature and content of the proposed facility, the public spaces must have a elevated degree of control and security. Spaces like the Exhibit Rooms and Galleries would certainly require some type of supervision where security is of concern to maintain visual control of the user while walking through the different display areas.

In attempting to make the new facility as efficient as possible, we feel that the square footage of the main circulation spaces could be increased above normal requirements in order for them to serve as additional gathering and display spaces. This space would likely be the most used area since it will in essence act as the friendly bridge for the museum and its activities. This in turn will increase the public's interaction and provide a place of rest for visitors, unlike most hallways which are designed to act as no more than a simple corridor.

Interior finishes shall be comprised of interior partitions constructed of drywall materials over metal studs with the sound blanket insulation to minimize sound travel. The floors could be accentuated with either polished stained concrete and/or terrazzo for the lobby and entrance

areas. The administration offices, classrooms and theater areas shall receive carpet to help decrease noise. Ceilings may vary from drywall materials to exposed ceiling structures to accomplish a contemporary touch while the offices and classrooms will receive suspended ceiling tiles to control sound travel.

to adventure, to share ideas, to learn something new and to gain news historical knowledge.

Whether at is a reception, a film or simply a high school art exhibit that has been put together at the new museum, the museum will be a place for the one residence to the and speak out about the individual and policouve growth of African Americans in South Florida.

CONCLUSION & RECOMMENDATION

The Virginia Key Beach Museum will be inserted into a historic and natural fabric that will play a great deal in the design of the structure. Throughout the design process it is essential that the design incorporates and compliments the natural environment. In turn, the surrounding areas around the museum should act as a veranda to the facility. In addition, to avoid the new museum from overshadowing the site, it is our recommended that the new museum should be a 2 stories facility range between 25,000 to 50,000 square feet in size.

The exact content of the museum should be reviewed in order to provide a more defined mission and approach so that the structure can be classified. This is an exercise that can be simply discussed during the programming phase that will be beneficial by pinpoint any unforeseen requirements and providing a direction for the facility. No matter how the structure is classified, the circulation areas and main spaces need to distinctive and flow smoothly. Natural light should be introduced horizontally and vertically into all spaces that will not display artwork that is light sensitive.

providing them with an arr and dinner
