Ocean to Gulf

OFFICE OF PRESIDENT

J. F. JAUDON

22nd St. W. of B. & O. St. N. W.

1544, N. W. Tenth Street.

MIAMI, FLA.

Detroit, August 6th, 1925.

Mr. E. G. Liebold,
Personal Secretary to
Mr. Henry Ford,
D E A R B O R N, MICH.

Dear Sir,

I am so very sorry that my illness prevented me from keeping engagement set by you at 10.30 Tuesday morning, and I also regret that it will not be possible for me to stay over in Detroit until next week and have a personal interview with you.

I am, however, enclosing you a brief summary of the possibilities of the recovery of Florida peat and the production of Light, Heat, Power and by-Products as prepared by Dr. Robert Ranson of Miami, Florida.

For the past eighteen months I have assisted Dr. Ranson in his investigation and survey of Florida peat and its value; he spent some fourteen months in Germany and other parts in Europe in a personal investigation of the manner used by the Mons and Perone processes in the utilization of peat for power and its by-products.

Could I suggest that you write Dr. Robert Ranson, P.O.Box 622, Miami, Fla., or in care of County Engineer Hobart Crabtree, Miami, Fla.

- 2 -

If after reading the enclosure and examining the sample of peat which I am enclosing, you desire a conference with Dr. Ranson, by yourself or your expert, I feel quite sure he would come to Dearborn and would give you the benefit of his knowledge, information and findings on the subject.

It is my regret that I could not see you in person, but I have other engagements which I must keep, but I trust you can and will take this matter up direct with Dr. Ranson.

I shall take pleasure in furnishing you any additional information.

Yours very truly,

J. F. JAUDON.
