

December 25th, 1911.

Mr. J. E. Ingraham,  
Vice-President,  
St. Augustine, Fla.

Dear Sir:

I have been to see Mr. W. J. Krome, who says that Twp. 59-37 is the poorest land that he knows of. He states the north boundary line is only three and half feet above mean low tide and that point is some ten miles from the bay; that he has been along the eastern edge of it, and that what he found of it was a marl prairie close to the rock, or with rock close to the surface; that it is covered mostly with low bush cypress and low bush mangrove, and that if he had it for sale he would sell it for most any price. He mentioned that it was the hardest trip that he had made in exploring the 'glades; that the low bushes were so close together and the rocks so near the surface that they could not pull their canoe along with them.

I suggest that you give Dr. H. L. Holmberg another thirty day option for \$500.00, at \$3.50 per acre, the same as in former option, and wish you would wire me tomorrow.

Yours very truly,

FSM/p
