Mr. Milo Coffrin

Miami, Fla.

Dear Mr. Coffrin:

Referring to our experimental plot of sugar cane

There were sixteen varieties planted by Mr. C.P. Sheffield on Sept. 20th 1930 and these plots were fertilized in Nov. by Dr. G.B. Sartoris Pathologist in charge of the Canal Point Station with a 5-8-5 mixture of commercial fertilizer with 200 lbs of manganese sulphate added to each ton of commercial .

The cane seems to be doing well and all plots are growing. I regret that I was unable to give you this data when you were here yesterday and trust this will reach you in time to hand to Mr. Hoffman.

Very truly yours

*J. M. Holferty*
