

This memorial Sanctuary is
proposed as a refuge for native
birds of Florida & migratory
birds - which by thousands pass
the winter in Florida. The Everglades
have been well called the
slaughterhouse of America
by T. Gilbert Johnson President
after National Audubon
Society. I am in New York
to get in touch with the
spirit of accomplishment that
permeates the northeast, as Florida
is so engrossed with the
interstate fund from that
it has little thought
of the birds.
